Toul Kork, Toul Sangkea, Rerssey keo, Phnom Penh, Cambodia
Sex: Male | Date of birth: 10/06/2003 | Nationality: Cambodian

I am an **AI Automation Engineer** focused on building reliable, scalable, and intelligent software solutions. I specialize in developing AI-driven workflows, LLM integrations, RAG systems, backend services, and RESTful APIs, with hands-on experience in full-stack development. I enjoy solving complex problems and transforming ideas into practical, production-ready systems that improve efficiency and deliver real value. I am a fast learner, dependable team player, and continuous learner passionate about advancing my expertise in AI automation, scalable system design, cloud technologies, and modern software architecture.

RELEVANT SKILLS

Backend: Python, FastAPI, Django, Django Rest Framework, WebSocket, Redis, ARQ and PostgreSQL

Frontend: Vue.js, Next.js, TypeScript and Tailwind CSS

Payment Gateway: Stripe, Lemon Squeezy, PayPal, ABA PayWay and ACLEDA ToanChet

AI Engineering: RAG Pipelines, LLMs integration and Agentic AI

DevOps & Cloud: Git & Github, CI/CD, Docker & Compose, Linux Server Administration, Nginx & Caddy, Cloud Deployment, Cloudflare

WORK EXPERIENCE

Twenty Twenty Digital (Role: AI Automation Engineer) (*2026 – Present)*

Project: Presentation Automation

- Built a pipeline that turns course slides and scripts into narrated videos.
- Matched each part of the script to the right slide automatically.
- Built a 3-layer AI agent system to improve, plan, and produce each video.
- Connected Claude, Gemini, and OpenAI with automatic fallback if one fails.
- Created natural voiceovers with ElevenLabs.
- Rendered 1080p videos with FFmpeg, adding subtitles and background music.
- Added an audio-only podcast version with chapters for listening on the go.
- Built a web studio with FastAPI and live progress updates.

Project: RPL Automation(Recognition of Prior Learning)

- Built a Slack bot that creates RPL assessment documents from a course code.
- Collected course details automatically from training.gov.au.
- Integrated the Claude API to write the assessment content for each course unit.
- Added an AI review step that finds problems and sends them back to fix.
- Generated three ready-to-use Word documents for each unit.
- Built it with FastAPI and saved every AI step for easy checking.

Project: AI-News Automation

- Built a daily pipeline that finds AI news and turns it into short videos.
- Checked each story against a second source to confirm it is true.
- Scored stories by how useful they are for business owners.
- Used LLMs to write scripts and fact-check every claim against the source.
- Created AI presenter videos with HeyGen and natural voiceovers with ElevenLabs.
- Added one-click approval in Slack before any video goes live.
- Auto-posted approved videos to Instagram Reels and YouTube Shorts.
- Scheduled daily jobs with Redis and ARQ.

Project: Content Migration Automation

- Built automated scrapers with Playwright to collect content from old websites.
- Cleaned up messy HTML so the content is clean and ready for the new website.
- Organized and improved the content, then mapped it into structured JSON fields for the new website.
- Used LLMs to rewrite, improve, and check content automatically, which made the migration faster and more reliable.

Independent / Freelancer (Role: Full-Stack Developer and AI System Builder) (*2025 – 2026)*

Project: Chessman Topup (Game Top-Up Store): *https://chessmantopup.com*

- Built an online store where players in Cambodia buy in-game credits.
- Integrated secure KHQR payments with ABA PayWay
- Made orders safe: no double charges, no double deliveries, and clear refund handling.
- Built a price sync that keeps game prices up to date and always protects a minimum profit.
- Added Telegram alerts and an admin panel so the owner can watch orders and fix problems quickly.
- Built the backend with FastAPI and PostgreSQL and the frontend with Next.js, and deployed both with Docker behind Cloudflare.

Project: ChatEaver (Enterprise AI Support Platform): *https://chateaver.com*

- Architected a multi-tenant AI customer support SaaS platform handling automated knowledge base ingestion.
- Engineered hierarchical RAG pipelines using LlamaIndex and pgvector
- Built a 3-layer Agentic Intent Orchestrator with dynamic multi-LLM fallback
- Developed low-latency bidirectional chat streaming using WebSockets and SSE for embeddable web widgets and Telegram bots.
- Designed workflows for live human support handoff, appointment scheduling, and Server-to-Server (S2S) APIs.
- Integrated multimodal Voice AI with Speech-to-Text (STT) and Text-to-Speech (TTS) for conversational voice interactions.
- Implemented Lemon Squeezy subscription billing with automated webhook handling and tiered access management.
- Containerized the full stack with Docker Compose and configured Caddy with automated SSL/TLS encryption on Linux.

Project: Runbodia (Marathon Events Platform): *https://runbodia.com*

- Architected a full-stack running events and marathon ticketing platform with high-concurrency race registrations.
- Integrated ACLEDA Bank KHQR payment gateway with idempotency tokens, secure redirects, and automated verification.
- Engineered automated 30-minute bib number lock reservations and multi-tiered pricing.
- Implemented digital ticket generation with signed QR codes for race-day check-in and automated email confirmations.
- Customized administrative operations with Django Unfold for live payment audits and capacity overrides.

Project: CaInvite (Digital Wedding Invitation): *https://cainvite.com (Maintenance)*

- Developed CaInvite, an online commerce platform for digital wedding invitation templates.
- Designed scalable PostgreSQL schemas and RESTful backend APIs integrated with a responsive Vue.js frontend.

EZZE Technology (Role: Junior Backend Developer) (*2024 – 2025)*

Project: MiniPOS (Telegram Mini-app point of sale)

- Architected a multi-tenant POS backend (Group Company → Company → Branch) with Django REST Framework and PostgreSQL.
- Enforced row-level data isolation with a custom filter backend scoping data to each user's company or branches.
- Built dynamic role-based access control mapping HTTP methods to Django model permissions.

- Implemented JWT auth with HttpOnly cookies, token rotation, Telegram PIN login, and brute-force lockouts.
- Designed a user approval workflow that delivers auto-generated credentials through Telegram.
- Built per-company Telegram bots with webhooks auto-updated via Django signals and English / Khmer replies.
- Built transaction APIs with a full status lifecycle, USD / KHR support, and payment status callbacks.
- Integrated ABA PayWay for KHQR transactions with HMAC-SHA512 signed requests and encrypted merchant credentials.
- Build inventory for each branch and linked products to every sale.
- Build customer and members modules with Telegram channel tracking
- Delivered daily sales reports by branch and currency through the API and Telegram bot.

Project: Decoder (AI Document and Code Scanner Bot)

- Built a three-part system: a FastAPI Telegram bot, a Django REST decoding API, and a Vue.js scanner Mini App.
- Designed a configurable step engine that guides each scan through image, text, and location steps with fallbacks.
- Decoded QR codes and barcodes with pyzbar and OpenCV preprocessing.
- Extracted passport and ID card MRZ data, converting birth and expiry dates into clean fields.
- Read Cambodian GDT VAT TINs from invoices using Google Cloud Vision OCR and Gemini parsing.
- Extracted device IMEIs from labels with Tesseract OCR, regex matching, and barcode fallback.
- Parsed ZTO shipping labels for tracking barcodes and recipient phone numbers.
- Used Gemini 2.0 Flash with task-specific prompts to turn raw OCR text into structured JSON.
- Secured bot webhooks and internal APIs with secret GUIDs, and linked each scan to a user, image, and GPS location.
- Added English / Khmer bot replies, menu commands, contact sharing, and a camera QR scanner

POSFlow Solution (*2023 – 2024)*

QA and Technical Support Specialist

- Provided tier-1 and tier-2 technical diagnostics and quality assurance for enterprise POS systems.
- Configured, deployed, and serviced network infrastructure including routers, switches, LAN/WAN, and thermal printer peripherals.
- Conducted methodical system testing, bug reproduction, and regression verification on client retail software.
- Delivered rapid customer problem resolution and hardware troubleshooting under tight uptime SLAs.

EDUCATION AND TRAINING

Royal University of Phnom Penh

Bachelor of Computer Science March 2021- May 2025

- C, C++, Java, C# Programming, Python
- Database Management Systems (SQL Server)
- Data Structures and Algorithms
- Web Development
- Software Engineering
- IT Project Management
- Management Information Systems

Hun Sen Roleap Bar High School **(**2018 - 2021)

Bac II National certificated

PERSONAL SKILLS

Language

- Khmer: Native Language
- English: Good writing, speaking, listening, and reading skills

HOBBIES

- Sharing IT and AI content on blogs and social media
- Listening to music and playing games
- Reading to explore new technologies and improve skills
- Curiosity and Learning Continuously
- Researching new technologies
