Chon Sarak

AI Automation Engineer · Full-Stack Developer

+855 97 387 0816 (Telegram) · sarakchon11@gmail.com · Phnom Penh, Cambodia

Portfolio: chon-sarak.netlify.app · LinkedIn: chon-sarak · Telegram: @Sarak_chon

Date of birth: 10/06/2003 · Nationality: Cambodian

Profile

AI Automation and Full-Stack Engineer with 3+ years of experience, from QA and support to backend and AI systems. I build high-concurrency web apps, resilient APIs with FastAPI and Django, and production-grade RAG and multi-agent LLM pipelines. I have shipped 5 production systems, including a multi-tenant AI support SaaS, a marathon ticketing platform and a KHQR-powered game top-up store. I started in QA, so I design for failure first: idempotent payments, LLM fallbacks and audit trails for every AI step.

Work Experience

AI Automation Engineer — Twenty Twenty

2026 – Present · Full-time · Remote (Australia)

Presentation Automation

- Built a pipeline that turns course slides and scripts into narrated 1080p videos, with subtitles and background music rendered in FFmpeg.
- Designed a 3-layer AI agent system to improve, plan and produce each video, with automatic fallback across Claude, Gemini and OpenAI.
- Matched each part of the script to the right slide automatically and generated voiceovers with ElevenLabs.
- Added an audio-only podcast version with chapters, and a FastAPI web studio with live progress updates.

RPL Automation (Recognition of Prior Learning)

- Built a Slack bot that generates three ready-to-use Word assessment documents per unit from a single course code.
- Pulled course details automatically from training.gov.au and used the Claude API to write the assessment content.
- Added an AI review step that finds problems and sends them back for correction; every AI step is logged for audit.

AI-News Automation

- Built a daily pipeline that finds AI news, verifies each story against a second source and scores it for business relevance.
- Used LLMs to write scripts and fact-check every claim, then produced AI presenter videos with HeyGen and ElevenLabs.
- Added one-click Slack approval and auto-posting to Instagram Reels and YouTube Shorts; scheduled jobs with Redis and ARQ.

Content Migration Automation

- Built Playwright scrapers to collect content from legacy websites and cleaned messy HTML for the new site.
- Mapped content into structured JSON fields and used LLMs to rewrite and check it, making the migration faster and more reliable.

Full-Stack Developer & AI Systems Builder — Freelance

2025 – 2026 · Contract · Phnom Penh, Cambodia

- Designed, built and deployed 4 client products end to end: ChatEaver, SportPro (RunBodia), Chessman Topup and CaInvite (details under Selected Projects).
- Integrated Cambodian payment gateways (ABA PayWay and ACLEDA KHQR) with idempotent order handling and automated verification.
- Shipped every product with Docker on Linux, behind Caddy, Nginx or Cloudflare with automated SSL.

Backend Developer — EZZE Technology

2024 – 2025 · Full-time · Phnom Penh, Cambodia

- Built RESTful APIs with Django REST Framework, integrated with Vue.js dashboards.
- Developed and maintained Telegram automation bots with Django and FastAPI.
- Integrated local Cambodian payment gateways for instant QR transactions and callback validation.

- Configured production Linux servers (Apache, Gunicorn, SSL, systemd) and optimized PostgreSQL and MySQL databases.
- Built a Python desktop client for internal admin operations and kept Git reviews and API docs up to date.

QA & Technical Support Specialist — POSFlow Solutions

2023 – 2024 · Full-time · Phnom Penh, Cambodia

- Provided tier-1 and tier-2 diagnostics and quality assurance for enterprise POS systems under strict uptime SLAs.
- Ran system testing, bug reproduction and regression checks on client retail software.
- Installed and serviced routers, switches, LAN/WAN networks and thermal printer peripherals.

Selected Projects

ChatEaver — Enterprise AI customer support SaaS (live)

FastAPI · Next.js · LlamaIndex · pgvector · WebSockets · Multi-LLM · Docker

- Architected a multi-tenant AI support platform with automated knowledge-base ingestion.
- Engineered hierarchical RAG pipelines with LlamaIndex and pgvector for context-accurate retrieval.
- Built a 3-layer agentic intent orchestrator with multi-LLM fallback across OpenAI, DeepSeek and Gemini.
- Streamed chat over WebSockets and SSE to an embeddable web widget and Telegram bots, with voice AI (STT/TTS).
- Designed human handoff, appointment booking and Server-to-Server APIs; added Lemon Squeezy subscription billing.

Chessman Topup — Game top-up store for Cambodia (live)

FastAPI · Next.js · PostgreSQL · ABA PayWay · Docker · Cloudflare

- Built a store where players pay by KHQR through ABA PayWay and receive in-game credits automatically.
- Made orders safe against double charges and double deliveries, with clear refund handling.
- Built a price sync that keeps prices current while protecting a minimum profit margin.
- Added an admin panel, Telegram alerts and Khmer/English language support.

SportPro (RunBodia) — Marathon ticketing platform (live)

Django · DRF · Vue.js · PostgreSQL · ACLEDA KHQR

- Built high-concurrency race registration with ACLEDA Bank KHQR payments, idempotency tokens and automated verification.
- Engineered 30-minute bib-number reservation locks and tiered pricing (Early Bird, Regular, Late).
- Generated digital tickets with signed QR codes for race-day check-in and automated email confirmations.
- Customized a Django Unfold admin for live payment audits and capacity overrides.

Telegram RAG Assistant — Personal AI assistant (live on Telegram)

Telegram Bot API · FastAPI · pgvector · Multi-LLM

- Connected to the ChatEaver RAG core to answer questions about my projects, experience and skills.

CaInvite — Digital wedding invitation store

Django · DRF · PostgreSQL · Vue.js · Tailwind CSS

- Built a commerce platform for browsing, customizing and buying digital wedding invitation templates, with automated fulfillment.

Technical Skills

Area	Skills
AI & Automation	LLM integration (Claude, OpenAI, Gemini, DeepSeek), RAG pipelines, LlamaIndex, pgvector, agentic AI, multi-LLM fallback, ElevenLabs, HeyGen, Playwright
Backend	Python, FastAPI, Django & DRF, PostgreSQL, MySQL, SQLAlchemy, SQLModel, WebSockets & SSE, Redis & ARQ background jobs
Payments	KHQR, ABA PayWay, ACLEDA Bank, Stripe, PayPal, Lemon Squeezy
Frontend	Vue.js 3, Next.js, TypeScript, Tailwind CSS, Vite, state management

Area	Skills
DevOps & Cloud	Linux server admin, Docker & Compose, Nginx, Caddy & SSL, Cloudflare, CI/CD, Git & GitHub, Postman
Integrations	Slack bots, Telegram Bot API, FFmpeg

Education

Bachelor's degree, Information Technology — Royal University of Phnom Penh (RUPP)

2022 – 2025

Front-End Web Development

2021 – 2022

- Learned the foundations of front-end web development (HTML, CSS, JavaScript).

Languages

- Khmer: native
- English: very good (professional working proficiency)
